

'Be wise, immunise' flu and COVID-19 vaccinations 24/25 communications toolkit

For eligible groups from 3 October

(v4. 03/10/24)

A previous toolkit was issued for flu vaccinations only - [flu toolkit 1](#) (1/09/24)

Be wise, immunise!

*This campaign toolkit is available **for communication leads across the NHS, local authority and other partners to use and adapt** to encourage uptake of the flu and COVID-19 vaccinations, in recommended cohorts.*

It has been produced by the North East and North Cumbria Integrated Care Board (ICB)

The 'Be wise, immunise' flu and COVID-19 campaign for the North East and North Cumbria encourages all eligible groups to get their recommended vaccinations, **from 3 October**, including:

Flu

- anyone who is pregnant
- all children aged 2 or 3 years on 31 August 2024, primary school aged children (from Reception to Year 6), secondary school aged children (from Year 7 to Year 11) and all children in clinical risk groups aged from 6 months to less than 18 years to take up the offer of their flu vaccines this winter.
- close contacts of anyone who is immunosuppressed

COVID-19

- those aged 65 years and over
- 18 years to under 65 years in clinical risk groups (as defined by the Green Book, Influenza Chapter 19)
- long-stay residential care home residents and staff
- anyone who is pregnant
- carers
- frontline health and social care workers

Download our campaign assets

All campaign assets for flu and COVID-19 vaccinations are now available to download on the North East and North Cumbria Integrated Care Board (NENC ICB) [toolkit page](#) and will go live on ICB social media accounts from **3 October 2024**.

Once again, we are asking colleagues and partners across the region to join us and help to spread the word - *Be wise, immunise*.

Not only that but by working together we know that our messages are stronger and can reach many more of our communities – which means more people get vaccinated and are then protected against flu and COVID-19 which can cause serious illness.

So, how you can help?

Check out our toolkit!

Information and content in the [toolkit](#) can be used on websites, social media, or other communication channels. More content will be shared as we roll out the campaign. If there's something missing from the toolkit, or you would like something specific for your own organisation or channel - or simply have an idea on how we could better reach people or share our messages – then please get in touch.

Who we are targeting

Our *Be wise, immunise* campaign aims to reach out to all eligible groups, but we are specifically focusing on areas and groups of people where data has shown uptake has been lower in the past including:

- 2–3-year-olds
- anyone who is pregnant
- people at high clinical risk

This toolkit guide covers all eligible vaccination groups for flu and COVID-19 but there are separate more detailed packs available for flu vaccinations for nurseries and schools - <https://northeastnorthcumbria.nhs.uk/here-to-help/covid-19-and-flu/>

Your support in raising awareness with all eligible cohorts about the importance of getting the flu and COVID-19 vaccines this year is very much appreciated.

For further help or advice on using the toolkit or if you need support to tailor assets, please contact either:

Andrea Jones, andrea.jones2@nhs.net or Abbie Mulgrew, abbie.mulgrew@nhs.net

Who is recommended to have the flu and COVID-19 vaccines this winter?

Flu - In line with advice from the Joint Committee on Vaccination and Immunisation, those advised to have a flu vaccine this year include: (1.7m across NENC)	COVID-19 - In line with advice from the Joint Committee on Vaccination and Immunisation, those advised to have a COVID-19 vaccine this year include: (1.2m across NENC)
<p>From 1 September</p> <ul style="list-style-type: none"> • anyone who is pregnant • all children aged 2 or 3 years on 31 August 2024 • primary school aged children (from Reception to Year 6) • secondary school aged children (from Year 7 to Year 11) • all children in clinical risk groups aged from 6 months to less than 18 years <p>From 3 October</p> <ul style="list-style-type: none"> • people aged 65 years and over • those aged 6 months to under 65 years in clinical risk groups (as defined by the Green Book, chapter 19 (Influenza)) • people in long-stay residential care homes • carers in receipt of carer's allowance, or those who are the main carer of an elderly or disabled person • close contacts of immunocompromised individuals • frontline health care workers • front line social care workers 	<p>From 3 October</p> <ul style="list-style-type: none"> • anyone who is pregnant • people aged 65 years and over • people aged 18 years to under 65 years in clinical risk groups (as defined by the Green Book, Influenza Chapter 19) • people in long-stay residential care homes • carers in receipt of carer's allowance, or those who are the main carer of an elderly or disabled person • frontline healthcare workers • frontline social care workers

Short syndicated copy autumn/winter flu

This winter **Be wise and immunise with your free flu and COVID-19 vaccines!**

The risks from flu and COVID-19 are still real ...

For some, flu and COVID-19 can be unpleasant. But for others, especially those with certain health problems, older people, and pregnant women, it can be very dangerous or even life-threatening.

The NHS recommends the flu and COVID-19 vaccines to those at highest risk from severe illness. Not only does it keep you safe but it reduces the risk of it spreading to others and helps protect your loved ones.

From **3 October**, anyone who is pregnant, everyone aged 65 and over, and those who turn 65 years, by 31 March 2025, people aged 18 to 65 with certain health conditions, carers and all health and social care workers will be eligible for both a free flu and COVID-19 vaccine.

Anyone who is pregnant will be invited to have their flu and COVID-19 vaccines at their GP practice or during a routine antenatal visit.

Over 18's can book a flu and /or COVID-19 vaccine by using the NHS App, visiting the NHS website, or calling 119 for free. If you're eligible, you'll also get an invitation the NHS or your GP practice.

Children aged 2 or 3 years (on 31 August 2024), school children from Reception to Year 11 and close contacts of people with weak immune systems will be eligible for a free flu vaccine only.

If your child is aged 2 or 3 years old, or if they are aged over 6 months or older with certain health conditions, you can book a flu vaccination appointment at their GP surgery. We encourage you to book your child's flu vaccine as soon as the vaccine becomes available. If your child is of school age, you do not need to make an appointment. They will be vaccinated in schools or community clinics – make sure that you sign their consent form.

The NHS is also visiting housebound patients' and people in care homes to give the vaccine.

Don't forget! If you are pregnant, or if you are aged 75 to 79, you can also get the new **RSV vaccine** from **1 September 2024**. This vaccine protects children and older adults from bronchiolitis and pneumonia. If you're aged 75 to 79, your GP surgery will contact you about getting vaccinated. If you are 28 weeks pregnant or more, you can speak to your midwife or GP surgery about getting your RSV vaccination.

If you are pregnant, it is also recommended that you get your pertussis (whooping cough) vaccine after 16 weeks of pregnancy, from your GP or at a routine antenatal clinic.

You can find out more information about winter vaccines, if you are eligible, and how to book by visiting www.nhs.uk/wintervaccinations.

Don't get caught out this winter - **Be wise, immunise.**

Key messages COVID-19 (general)

- COVID-19 is still with us and is still making people very ill.
- Those at increased risk from COVID-19, due to a health condition or medical treatment, are eligible for a seasonal vaccination for extra protection this winter, when viruses spread much more easily and can cause greater harm.
- This includes people who are pregnant, people who have a lung or heart condition, kidney or liver disease, problems with the brain or nerves, a learning disability, diabetes or a severe mental illness. It also includes people with weakened immune systems.
- If you're not sure if you're at increased risk, you can find out more at <https://www.nhs.uk/vaccinations/covid-19-vaccine/>
- If you are eligible, it is important to top up your protection even if you have had earlier vaccinations or have had the virus, as your immunity from these fades over time.
- It can take 14 days for the vaccination to take full effect, so everyone due a further dose is encouraged to get it as early as possible for maximum protection.
- COVID-19 vaccines and the flu vaccine can be co-administered. This year the NHS is making it easier to receive both of these seasonal vaccinations at the same time. However, if getting both vaccines together is not possible, you should get each vaccination as soon as you can for better protection ahead of winter, rather than waiting.
- You can have your seasonal COVID-19 vaccine if it's been at least three months since you had your previous dose.
- You can get your COVID-19 vaccine at any participating local pharmacy, by booking an appointment at your GP practice, online on the NHS website, using the NHS App or by calling 119.

Key messages flu (general)

- Flu can be very dangerous, even life threatening for some, particularly people with certain health conditions. The flu vaccine is safe and effective, and it's recommended every year to help protect people at risk of getting seriously ill from flu.
- If you're eligible for a free vaccine, it's important to get it every autumn because the viruses that cause flu change each year. This means flu (and the vaccine) this year may be different from last year.
- Preventing people from becoming ill, hospitalised, or dying from flu through vaccination is one of the main tools we have to protect our health and social care services.

Latest statistics from 23/24 on excess illness, deaths, and staff absences due to flu tell us that:

- There were around 2,800 deaths associated with flu in England from October 2023 to March 2024.
- Flu spread in the population for longer in the 2023 to 2024 season, but peak activity was lower.
- It takes 2-3 weeks for the vaccine to provide immunity and so early vaccination, when the vaccine is offered to you, is essential.
- The impact on health and social care services was significant and, through higher levels of vaccination of staff and patients/clients, more of the impact could have been avoided.

You can get your flu vaccine at any participating local pharmacy, by booking an appointment at your GP practice, online on the NHS website, using the NHS App or by calling 119.

Key messages children (flu) – www.nhs.uk/child-flu

- Children should receive the flu vaccine as soon as possible to protect them and help stop the virus spreading to others.
- Flu can be a horrible illness in young children.
- The child flu vaccine reduces your child's chance of needing hospital care for flu by around two thirds.
- Vaccinating your child helps protect them from flu and prevent it spreading among vulnerable family and friends
- The child flu vaccine is usually given as a quick and painless spray up the nose.
- Your child can get a flu vaccine if they are aged 2 years to school Year 11, or from aged 6 months with certain health conditions
- If your child is aged 2 or 3 years old or if they are aged over 6 months or older with certain health conditions, you can book a flu vaccination appointment at their GP surgery. We encourage you to book your child's flu vaccine as soon as the vaccine becomes available.
- If your child is of school age, you do not need to make an appointment. They will be vaccinated in schools or community clinics – make sure that you sign their consent form.

**Remember to complete
your child's vaccination
consent form.**

Flu syndicated copy children

Don't underestimate flu, protect your child with a free vaccine!

Children aged 2 and 3 years will be offered a flu nasal spray vaccine at their local GP surgery.

All primary school pupils and secondary school pupils up to and including Year 11, will be able to get a flu nasal spray vaccine at school or in a community clinic setting.

Those with long term health conditions aged over 6 months can attend their GP surgery for the flu nasal spray vaccine or get it from their school immunisation team.

School aged pupils will need parental/carer consent to receive their vaccines. Consent forms will be sent either using a link to an electronic form or in paper format.

The vaccine takes about two weeks to work fully and is given as a painless nasal spray. It's quick, safe, and effective and helps prevent children passing the virus on to vulnerable family and friends.

Flu can be extremely serious, even for healthy children, and can lead to other serious problems such as bronchitis and pneumonia.

The nasal spray is the most effective way to protect your child from becoming severely unwell with flu and provides protection to other more vulnerable family members, such as older relatives and young babies.

It can help prevent your child needing to take time off school and away from other activities too.

Parents and carers of primary and secondary school aged children are asked to complete their consent forms as soon as possible.

Information about flu vaccination, and how children can get vaccinated across the North East and North Cumbria, is made available by local school immunisation teams.

If you do not receive a consent form for your child, you can contact their school immunisation team or GP about getting one.

If a nasal spray is not suitable for your child, your School Immunisation Team, GP or practice nurse may be able to offer a flu vaccine injection as an alternative.

Key messages pregnancy flu and COVID-19

- Flu and COVID-19 can be serious if you are pregnant, for you and your unborn baby.
- If you have flu or COVID-19 while you're pregnant, it could cause your baby to be born prematurely or have a low birth weight.
- Catching flu or COVID-19 while pregnant may increase the need for admission to intensive care for you and your baby and may even lead to stillbirth or death.
- If you're pregnant and you catch flu or COVID-19 you are at higher risk of serious complications, such as bronchitis and pneumonia.
- Getting vaccinated is the safest and most effective way for you to protect yourself and your baby against flu and COVID-19.
- Getting the flu and COVID-19 vaccines will mean you and your baby are less likely to experience complications if you catch the viruses.
- The flu and COVID-19 vaccines help to protect you and your baby from serious illness and provides your baby with protection for the first few months of life.
- It's safe to have the flu and COVID-19 vaccines at any stage of pregnancy from the first few weeks up to your expected due date and if you are breastfeeding.
- If you're pregnant, get vaccinated against flu and COVID-19 as soon as you are invited.
- As well as other booking options, some midwives can give the flu and COVID-19 vaccines at an antenatal clinic.
- Talk to your midwife about recommended vaccines during pregnancy including whooping cough and RSV. Flu vaccine starts from 1 September, COVID-19 vaccines start from 3 October.

Short syndicated copy pregnancy

Bump up your protection!

If you're pregnant, it's strongly recommended that you get vaccinated against flu and COVID-19 to **protect you and your baby**.

You're at higher risk of getting seriously ill from flu and COVID-19 if you're pregnant, and if you catch the virus late in your pregnancy, your baby could also be at risk.

You can have the vaccines at any stage of pregnancy - from the first few weeks up to your due date and while breastfeeding!

The vaccines don't contain a live virus and cannot give you or your baby flu or COVID-19.

The vaccines are tested and **SAFE** and will protect you and your baby now and for the first few months after your child is born.

Talk to your midwife, GP, or pharmacist for more information. Protect yourself and protect your baby.

Short syndicated copy – religious questions

Some people have questions about whether the vaccines are suitable for them because of their religion.

The government has published information on this to help people consider the options.

Pregnancy – Flu and COVID-19

5. Pregnant

Bump up your protection!

If you are pregnant your risk of serious complications from flu and COVID-19 is higher—and it could affect your baby too.

It's safe to get the flu and COVID-19 vaccines anytime while pregnant and even while breastfeeding.

The vaccines don't contain a live virus, so can't give you or your baby flu or COVID-19.

You can get your free flu and COVID-19 vaccines at your regular antenatal visit or GP practice.

Talk to your midwife about other recommended vaccines during pregnancy including whooping cough and RSV.

Find out more at
<https://www.nhs.uk/pregnancy/keeping-well/vaccinations/>

High risk conditions

8. High risk general

Anyone can get flu or COVID-19, but some people are at higher risk of developing serious complications including those with high risk health conditions such as:

- heart disease
- chest complaint or serious breathing difficulties – asthma, bronchitis, COPD and emphysema
- kidney disease
- lowered immunity from disease or treatment - steroid medication or cancer treatment
- liver disease
- stroke or a transient ischaemic attack (TIA)
- diabetes
- neurological conditions - multiple sclerosis (MS), Parkinsons or cerebral palsy
- a learning disability
- a problem with your spleen, such as sickle cell disease, or you have had your spleen removed
- you are seriously overweight (BMI of 40 and above)

Protect yourself by getting both vaccines to stay safe and avoid hospital visits!
